

Automated Rubric Assignment Evaluator

NAME-BHUMIKA PRAVEEN PATIL

SRN-PES1UG24AM352

SECTION-F

USE-CASE FLOW SPECIFICATION

Use Case ID	UC-02	Use Case	Evaluate Project Submission
Primary Actor	Automated Evaluator System	Supporting Actor	Student

1. Preconditions

- The student has uploaded a project ZIP file.
- The uploaded submission has passed file validation and is present in the evaluation queue.
- A pre-configured unit test suite and rubric are available for the submission.

2. Postconditions

- Unit tests have been executed on the submitted project.
- Test results have been recorded.
- The itemized rubric score has been calculated.
- The evaluation results have been stored and are available to authorized users.

3. Main Success Scenario

1. The system retrieves the next valid project submission from the evaluation queue.
2. The system loads the pre-configured unit test suite and evaluation rubric.
3. The system executes the unit tests on the submitted project.
4. The system records the test results.
5. The system applies the configured rubric criteria to the evaluation results.
6. The system calculates the itemized rubric score.
7. The system stores the test results and rubric score against the submission.
8. The system marks the submission as evaluated.
9. The system makes the evaluation results available to authorized users.
10. The use case ends successfully.

4. Alternate Flow — Unit Test Execution Failure

- 3a.1. The system detects that the unit test suite could not be executed successfully.
- 3a.2. The system records the execution failure for the submission.
- 3a.3. The system marks the submission as requiring attention.
- 3a.4. The system notifies the appropriate user that the automated evaluation could not be completed.
- 3a.5. The use case ends without generating a final automated rubric score.
